

Pump any liquid* from any container, easily and safely without spills or mess!

New!

GoatThroat™

Hand-pressurized precision pumps that handle anything

There's nothing like it anywhere!

This revolutionary new pump costs far less than competitive products, and quickly pays for itself by preventing potentially hazardous spills and assuring precise, measurable flow control. Unlike costly electric pumps, GoatThroat™ pumps are simple, safe and inexpensive. A few strokes of the plunger can pressurise any container from 5 litre jugs to 200 litre drums - with no potential sparking hazard that can make electric pumps unsuitable for many uses.

The old way...

Gravity transfer can cause leaks, spills and lost inventory

The GoatThroat way

Leakproof, spillproof, hand-pressurized for precise one-touch flow control

Check out these features!

Durable: Constructed of 100% non-reactive polypropylene, GoatThroat™ hand pumps are engineered to handle virtually any liquid.

Safe: Drip-proof to help prevent potentially hazardous spills of toxic substances. Patented internal pressure relief valve.

Versatile: Safe for use with more than 700 liquids, fits all common container sizes, transfers quickly from container to container.

Economical: The one-touch flow control dispenses liquids at a controlled rate to prevent waste and to pump precisely measured amounts every time.

Proven: Thousands of pumps now in use by laboratories, hospitals, agricultural facilities and industries from aviation to zoo keeping.

Geneva Int'l Invention Exposition

Fits anything, pumps anything

GoatThroat™ pumps fit any container from 5 to 200 litres, and can easily be transferred quickly and easily from one container to another.

Three models are available to pump nearly any liquid.*

■ **GT 100** (red)
Nitrile seal for **petroleum based products** including oil, diesel fuel, glycerine, chloride, etc.

■ **GT 200** (blue)
EPDM seal for **general purpose chemicals** including acids, acetates, alcohols and phosphates.

■ **GT 300** (green)
Viton® seal for **aggressive chemicals and solvents** including bromine, sulphuric acid, ethylene, nitric acid, pesticides, gasoline, etc.

*Consult GoatThroat™ Compatibility Guide for specific applications.

Plunger pressurises most containers with only a few strokes

Patented internal pressure relief valve helps prevent hazardous overpressurisation

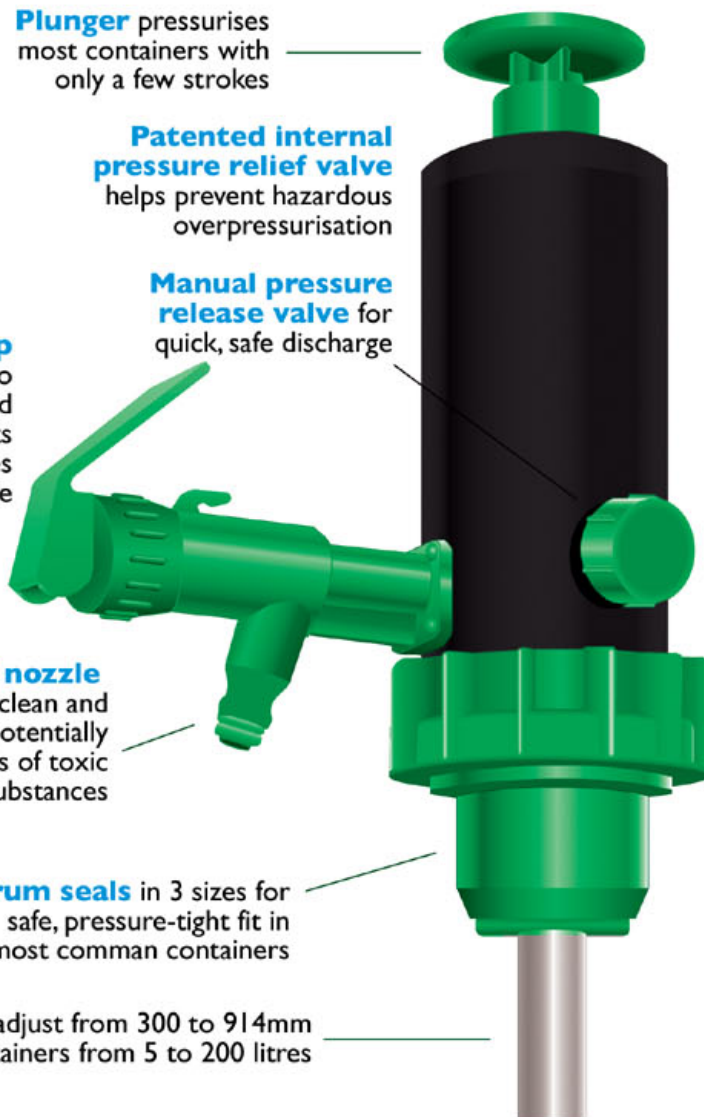

Manual pressure release valve for quick, safe discharge

One-touch tap controls flow to dispense any liquid in precise amounts at up to 17 litres per minute

Drip-proof nozzle keeps work areas clean and helps prevent potentially hazardous spills of toxic substances

Drum seals in 3 sizes for safe, pressure-tight fit in most common containers

Siphon tubes adjust from 300 to 914mm for use with containers from 5 to 200 litres

Each kit contains

- 1 GoatThroat™ precision pump
- 3 drum seals (small, medium, large)
- 4 siphon tube segments
- 3 siphon tube connectors
- 1 foot piece

Available spare parts

- Replacement drum seals
- Replacement washers and O-rings
- Additional tube segments

Optional accessories

Remote discharge nozzle

Extension Hose
